

GeoAdvice Engineering Inc. specializes in water and wastewater infrastructure hydraulic modeling, analysis, and training.

Specific applications of GeoAdvice's hydraulic modeling services include:

- Hydraulic and water quality simulation analysis
- Pump scheduling using GA optimization
- Model building, calibration and validation
- Vulnerability and security assessment
- Capital forecasting and budgeting
- System operations
- Fire flow assessment
- Master servicing plan
- GIS integration
- Unidirectional flushing

"GeoAdvice is proficient with industry standard software such as InfoWater, WaterCAD, and H₂OMAP. GeoAdvice can assist you with:

- System operation improvement;
- Pumping cost minimization; and
- Infrastructure optimal replacement."

Dr. Werner de Schaezen, P.Eng.

Passion / Performance / Professionalism

GeoAdvice provides training courses for water utilities and consultants. Our goal is to offer courses that:

- Make new technology easy to understand
- Combine theoretical knowledge with practical experience
- Provide practical skills for problem solving

Customized agendas to fit your needs:

- Introductory courses on modeling software
- Specialized technical training
- Strategic water distribution management
- On-site location
